The *Virology Journal* – the official publication of Dr. Fauci's National Institutes of Health – published what is now a blockbuster article on August 22, 2005, under the heading – get ready for this – **"Chloroquine is a potent inhibitor of SARS coronavirus infection and spread."** (Emphasis mine throughout.) Write the researchers, "We report…that chloroquine has strong antiviral effects on SARS-CoV infection of primate cells. These inhibitory effects are observed when the cells are treated with the drug **either before or after exposure to the virus, suggesting both prophylactic and therapeutic advantage**."

This means, of course, that Dr. Fauci has known for 15 years that chloroquine and its even milder derivative hydroxychloroquine (HCQ) will not only treat a current case of coronavirus ("therapeutic") but prevent future cases ("prophylactic"). So **HCQ functions as both a cure and a vaccine.** In other words, it's a wonder drug for coronavirus. Said Dr. Fauci's NIH in 2005, "concentrations of 10 μM **completely abolished** SARS-CoV infection." Fauci's researchers add, "chloroquine can effectively **reduce the establishment of infection and spread** of SARS-CoV."

lmao and if you apply 350°F heat to a cell culture it will kill all the coronavirus in it immediately but I don't think any of y'all are about to step into an oven
